## **DETAILED ACTION**

### ***Specification***

The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

#### **Arrangement of the Specification**

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT
- (e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) or  
REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)
- (f) BACKGROUND OF THE INVENTION.
  - (1) Field of the Invention.
  - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (g) BRIEF SUMMARY OF THE INVENTION.
- (h) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (i) DETAILED DESCRIPTION OF THE INVENTION.
- (j) CLAIM OR CLAIMS (commencing on a separate sheet).
- (k) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (l) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

The abstract of the disclosure is objected to because it should be generally one paragraph. Correction is required. See MPEP § 608.01(b).

The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: Claim 6 recites, "...is formed of environmentally safe material, allowing for disposal in the regular trash, or landfill". This particular claim language is not found in the specification.

#### ***Claim Interpretation***

In order that prior art may be applied to the claims, the term "non-crushable" is being interpreted as meaning ***rigid***.

#### ***Claim Objection(s)***

Claim 1 is objected to because of the following informalities: The claim should begin with a capital letter and conclude with a period. Periods may not be used elsewhere in the claim. Appropriate correction is required.

#### ***Claim Rejection(s) - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 6,274,787 ("Downing").

As regards claims 1-6, Downing discloses a transparent, span-over the wound bandage comprising a rigid, transparent dome (note col. 4, lines 61-64). The dome may be vented with holes or openings to allow for air circulation (note col. 5, lines 53-58) and may have flanges (note members 82) and tape (adhesive 84), which overlie the flanges to secure the device to the skin of the user. The device is **capable** of one time use, capable of being disposed, and capable of have one side of the taped flange lifted for desired purposes such as cleansing or swabbing and then re-taped (*i.e.*, the taped flanged is capable of being replaced on the user). Also, the dome is **capable** of defining a wound such as a healing pustule to dry scab as the area of protection, is shaped to prevent touch of the wound site during showering or bathing, is **capable** of fitting over any vaccination site, is formed as a single cup with two side flanges to allow the tape (adhesive to secure the device to the skin), and is **capable** of being formed from environmentally safe material allowing for disposal in the regular trash.

### ***Conclusion***

The balance of prior art made of record and not relied upon is considered pertinent to applicant's disclosure in that they show domed wound protectors.
